Art Unit: 1745

1. Applicant's election with traverse of Group II in Paper No. 7 is acknowledged. The traversal is on the grounds that all of the groups have the same field of search and hence would not present an undue burden to the examiner. This is not found persuasive because the groups are not classified in the same area. As set forth in the July 11, 2003 restriction requirement, all three groups are classified in different areas in class 429 and thus require a different search. This presents undue burden to the examiner.

The requirement is still deemed proper and is therefore made FINAL.

2. Claims 1-5 and 8-9 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim.

3. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, all of the limitations of claims 6-7 must be shown or the features canceled from the claims. Applicant has not depicted the ion exchange resin. No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claim 6 is rejected under 35 U.S.C. 102(e) as being anticipated by Zuber et al.-US 6,309,772. (Zuber)

See column 4, lines 7-47; column 5, lines 30-67 of Zuber along Examples 1-2 and Figure 1. Reference is also made to the claims in Zuber. The electrically conductive carbon particles 3 have the catalysts components 4 thereon which are surrounded by the ion exchange resin 5.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Raistrick, Kato and Totsuka all set forth various methods of making catalytic electrodes for a fuel cell of interest.

7. The following is an examiner's statement of reasons for allowance: none of the prior art of record discloses the claimed method for making an electrode for fuel cells wherein a water repellent electrically conductive electrode structure that is gas permeable carries a catalyst thereon has an ion exchange resin applied onto the catalyst carrying electrode structure. The electrode structure is additionally formed of electrically conductive fibers having electrically conductive particles dispersed thereon.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

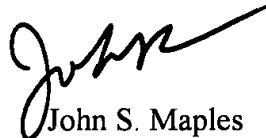

8. Claim 7 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
